

## Corrosion Laboratory

It is very important to study the degradation or corrosion of metals. To teach the corrosion behavior of metals, a corrosion lab has been established. It has just been availed the environmental chamber to observe the corrosion behavior in controlled atmospheres. In addition to this it has the following facilities:

- Corrosion kit
- Controlled DC power supply for electroplating
- Ovens
- Hot plates
- Corrosion related chemicals
- Potentiometers

Corrosion kit to observe the corrosion behavior of metals.

a view of atmospheric chamber.

Different DC power supplies and potentiometer.
